

Royer 2005, Watson 2005, Comis 2007, Knutson and Swart 2007, Smith 2007, Whitworth 2007). However,

frequent (89%) virulent biotype. This result corresponded well with the percentage (93%) of susceptible wheat plants carrying the resistance gene *H6* (Table 6). Biotype *vH13* was not detected in our biotype analysis. In the corresponding virulence test, only 2% of plants with *H13* were susceptible. The overall cor-

reflect the differences in biotype composition in different regional populations.
