

The focus of our study is in the Southern Great Plains, which stretches from Eastern

Results

Mann-Kendall Test

Figure 3: Data collected daily from 1909 to 2009. Kendall tau statistic is 0 if no correlation

Figure 5: Significant positive and negative trends in minimum and maximum ttveat

Figure 6: Table of adaptations to climate change for water, forests, rangeland, and agriculture from regions other than the Southern Great Plains.

Further results on forests

While the most information for adaption measures is

production technology we use. Policies concerning emissions can harm Kansas if we do not

and precipitation increases increase biomass produc

Policy

According to our results, there are not a lot of policies, or even programs, that enforce the
