cause disruption to flowering plants or old plants could cause a decrease in forb diversity (Chin & Harmon-Threatt, 2016). Haying also caused a drastic decline in the Enhanced Vegetation Index (EVI) after harvest but also caused rapid regrowth of prairie grasses and rapid increase of

location accompanied by minimal words can be an effective means at communicating information.

Figure 15: Branding Strategies for Promoting City Image (Rehan, 2014)

The goal is to attract patrons and investments to a particular local area. Urban branding aims to develop new ways of communicating city image to the rest of the region and strengthen the reputation of the city and corporate identity. It sicut
